I created the "Profile Page" Coding Project using Swift and Xcode.
- Xcode Version 11.4 (11E146)
- Deployment Info: iOS 13.4
- iOS Simulator used: iPhone 11

Notes:
To run this project, Xcode 11.4 or higher is required. The latest version of Xcode (12) can be downloaded from the App Store. If this is done, please set the Deployment Info to iOS 13.4, as I have used an older version of Xcode (11.4).

If you want to use Xcode 11.4, you can download it from:
https://developer.apple.com/download/more/

My project should work on either version 11.4 or 12.
